

Range Rover Raised Height Coil Spring Conversion Kits

Black Dog Manufacturing has designed a replacement kit for the air suspension system which is standard equipment on the Range Rover 4.0 and 4.6. This kit replaces the high-maintenance air suspension system with raised height coil springs.

Product Description

The replacement kit contains all of the hardware, spring perches, instruction and springs required to complete the task. The springs contained in this kit raise the car about 2" inches from the standard coil conversion kit. The instructions give a step-by-step procedure to safely extinguish the EAS system lights once the truck is converted. No "plug-in module" is required. The procedure does not require a vehicle lift, but one is recommended. While some vehicle owners could make the conversion, we recommend that installation be performed by a qualified shop or by someone with an advanced knowledge of mechanics.

Features & Benefits

- Contains fully illustrated instructions
- All brackets, springs and hardware are included
- Factory mounts do not require modification
- Eliminates the chronic air suspension system once and for all
- Springs raise the vehicle 2" inches higher than the standard kit
- Does not require a "plug in module"
- Save time and money-conversion can be done in about 5 hours
- View Comparison Pictures: Reg Height, Raised Height, Side by side.

Part# & Application

ROV.SPRINGKIT.B - Range Rover 4.0/4.6
