Se Habla Espanol

Jaguar is continuing its come back with the highly anticipated unveiling of the 2010 XJ. Chief designer Ian Callum redesigned the aging flagship model to coincide with the more modern designing of the well received XF model. Although the new XJ and XF models are related the XJ is closer to the 2007 CX-F concept car.

The new XJ's size is much larger than the XF with a wider upright grille, more conventional headlights, tapered vertical LED tail lamps and a panoramic moon roof that comes as a standard-fit on every

model. The XJ's chassis features aluminum construction making the Big Cat light on it's feet and 300 pounds less than it's closes competitor. The interior is a infusion of modern technology, leather, wood grain and trim (including eight veneers, carbon fiber or piano black) as well as classic touches like the analog clock on the dash. Under the hood you will see the new 5.0-liter direct-injected motor as well as a supercharged version. Both have a substantial horsepower increases, with the supercharged model hitting 60 mph in just 4.7 seconds, eliminating the need for a XJR version.

The new XJ can be ordered in the US now and is slated for delivery early next year. Although the jury is still out to see if the driving experience is up to par for Jaguar Enthusiast. The Jaguar Marquee has caught up to its German counterparts in every way, keeping it's luxury and sporty heritage in tack. Happy Motoring!

Pondering's

- Why do psychics have to ask you for your name?
- How do you tell when you run out of invisible ink?
- What happens if you get scared half-to-death twice?
- Whatever happened to preparations A through G?
- Why do they sterilize needles for lethal injections?
- Isn't Disney World a people trap operated by a mouse?
- Why do banks charge you a "non-sufficient funds fee" on money they already know you don't have?
- If a train station is where a train stops, what is a workstation?
- Have you ever imagined a world with no hypothetical situations?
- What's another word for thesaurus?
- Why are they called apartments, when they're all stuck together?
- Why is it called rush hour when everything moves so slow?

Motorcars LTD's Salvage Web site

Motorcars-Salvage.com recently, you are in for a nice surprise. We have added a vehicle look up catalog to make it much easier to find the quality used parts you are looking for. In the coming weeks we will be adding more use part to our used parts inventory so check back often.

Technical Tip

Explain to your customers why there are no returns on Electrical/Electronic Parts?

Electrical/electronic parts are easily damaged by improper installation or testing. Because electronics are very sensitive to voltage overloads, it does not take much of a voltage spike to ruin a component.

Unplugging a wiring connector while the key is still on can create a momentary voltage surge hundreds of volts. Crossing wires or using the wrong test procedures can also damage electronics. You have no way of knowing whether or not the part has been used or damaged.

Because of such risks, many jobbers refused to allow returns on any electronic components. This may seem unfair to some customers, but it protects the next customer who might get a bad part that had been returned. So be extra careful when ordering electronic parts to avoid return problems.
