Clean out Your Cooling System

This is especially for older cars that have been sitting for an extended period of time. This Tip will explain an easy way to clean out the cooling system and it even cleans out radiator cores - **it does NOT un block them** - it cleans them and increases the efficiency of your cooling system.

1. Drain all fluid out of the cooling system
2. Refill with fresh water
3. Add two cups of "washing soda" - 20 mule team has it and Arm and Hammer has it. Get it at the grocery store in the laundry soap area.
4. Close the system up - drive for a week or two
5. Drain the crud and the filth
6. Refill and repeat until the system is clean
7. When the desired results have been achieved, refill with the recommended mix of antifreeze and water.

This actually works wonders....and is easy and painless!
